

PHYSICS 4AL

EXPERIMENT 2: MEASUREMENT OF G

Terrence Ho | ID: 804793446

Date of Lab: April 25th, 2017

Lab Section: Tuesday, 5 P.M.

T.A.: David Bauer

Lab Partners: Kai Crane

DERIVATION OF EQUATION 2.1

We first set the velocity V_1 to be the distance d travelled between the first photogate and the second photogate over time T_1 . Similarly, the velocity V_2 is equal to the distance D over time traveled T_2 between the second photogate and the landing pad.

$$V_1 = \frac{d}{T_1} \quad \text{and} \quad V_2 = \frac{D}{T_2}$$

We substitute these velocities into the kinematic equation $V = V_o + g(t)$, where $V = V_2$, $V_o = V_1$, and t is equal to the average of the two times, or $t = \frac{T_1 + T_2}{2}$.

$$V_2 = V_1 + g\left(\frac{T_1 + T_2}{2}\right)$$

By substituting in the values for V_1 and V_2 , we get an equation that only contains the units that Equation 2.1 contained.

$$\frac{D}{T_2} = \frac{d}{T_1} + g\left(\frac{T_1 + T_2}{2}\right)$$

By rearranging the equation so that g is isolated, we end up with Equation 2.1.

$$g = \frac{2}{T_1 + T_2} \left(\frac{D}{T_2} - \frac{d}{T_1} \right), \text{ in terms of m/s}^2$$

PLOTS

DATA TABLES

Trial	Photogate Spacing d (m)	Gap to impact Sensor D (m)	Measured Acceleration g (m/s ²)
1	0.080 ± 0.005	.455 ± 0.005	10 ±
2	0.080 ± 0.005	.540 ± 0.005	10 ±
3	0.080 ± 0.005	.630 ± 0.005	10 ±
4	0.080 ± 0.005	.270 ± 0.005	10 ±
5	0.080 ± 0.005	.720 ± 0.005	10 ±

Trial	Gap to impact sensor D (m)	Uncertainty in measured acceleration g (m/s ²)
